**\*\*Single Stage Carbon Fiber Reeds**

For sustained High RPM operation (racing), add R suffix, e.g. 364R

Reeds are one way valves controlling the amount of air/fuel mixture entering the crankcase of your outboard engine, then sealing it in order to prevent it from escaping. Every two cycle outboard has them. But, the stock reeds in your outboard have a single-stage design that limits their efficiency. That's why stock outboards often cough and sputter at idle, fail to deliver a good hole shot, feel boggy or lifeless under throttle application, burn too much fuel or lack top end punch. Plus, standard reeds are made of metal. Should one break, it could cause extensive damage to your outboard. Boyesen Power reeds are different... and better! They feature a patented dual-stage design allowing our reeds to respond instantly to any change in air/fuel flow as you accelerate or back off the throttle. The result? A dramatic increase in efficiency and performance across the entire power band, from start-up to flat out!
